Add all your application items to Windows Explorer Shell context menu right now – fast and exactly as you prefer :

First, some words about appending of your items to Explorer context menu - and about how you may do it.

In addition to Explorer Context Menu Platinum from Context-Menu.com, to add items to Explorer Shell context menu you may also use, according to Microsoft guidelines, appropriate .Net component - Explorer Context Menu.

Shell context menu items appending component is a COM server, that may be written, according to Microsoft specifications, only on unmanaged C++.

You may spend hours and hours, day by day trying to add your items to Windows Explorer shell context menu by writing unmanaged C++ implementations for outdated IContextMenu.QueryContextMenu, IShellExtInit.Initialize, IContextMenu.InvokeCommand, RegisterServer, IContextMenu.GetCommandString, UnregisterServer, for many others - and all it on unmanaged C++, because managed code, written, for example, on C# or VB, may not be correctly used in shell extension.

Days of work with unmanaged C++ code, your clients protests when your application for the umpteenth time crashed Explorer and even all client computer - Is any salvation in such hard situation?

Yes - and it is Context Menu Platinum.

We spent more than 4 years writing, extending and improving it for you to add your menu items to Windows Explorer shell context menu - for you to add menu items easily and fast.

Key features:

- * Explorer shell context menu - easy to use in your program (just add 1 line of template code for every item you want to add to shell menu);
- * Easy to deploy (just add 1 small file to your installation pack);

* Works on any computer

(all modern operating systems are supported, including Windows XP and all types of Vista);
