IShellExtInit Interface Description

IShellExtInit is a low-level Windows 95 - Windows 98 interface used in those operating systems to add items to Windows Explorer Shell context menu. Because IShellInit programming interface may be used on outdated operating systems, such as Windows for Workgroups, Windows 95 or Windows 98, to add custom items to Windows Explorer Shell context menu you should use, according to Microsoft guidelines, appropriate .Net component - Windows Explorer Shell Context Menu. This developer-friendly .Net component for custom items appending to Explorer context menu with full C# and VB.NET support will add all your items to Explorer context menu in a very easy way.

IShellExtInit Members

Initialize Initializes a property sheet extension, shortcut menu extension, or drag-and-drop handler.

Remarks

Implement IShellExtInit when you are writing a handler based on the IContextMenu or IShellPropSheetExt interface.

Note that Shell extensions based on other interfaces do not use this method of initialization.

You do not use this interface directly. The Shell calls it to initialize the handler.

Interface Information

Minimum DLL Version shell32.dll version 4.0 or later

Custom Implementation No

Inherits from IUnknown

Header shlobj.h

Minimum operating systems Windows NT 4.0, Windows 95
